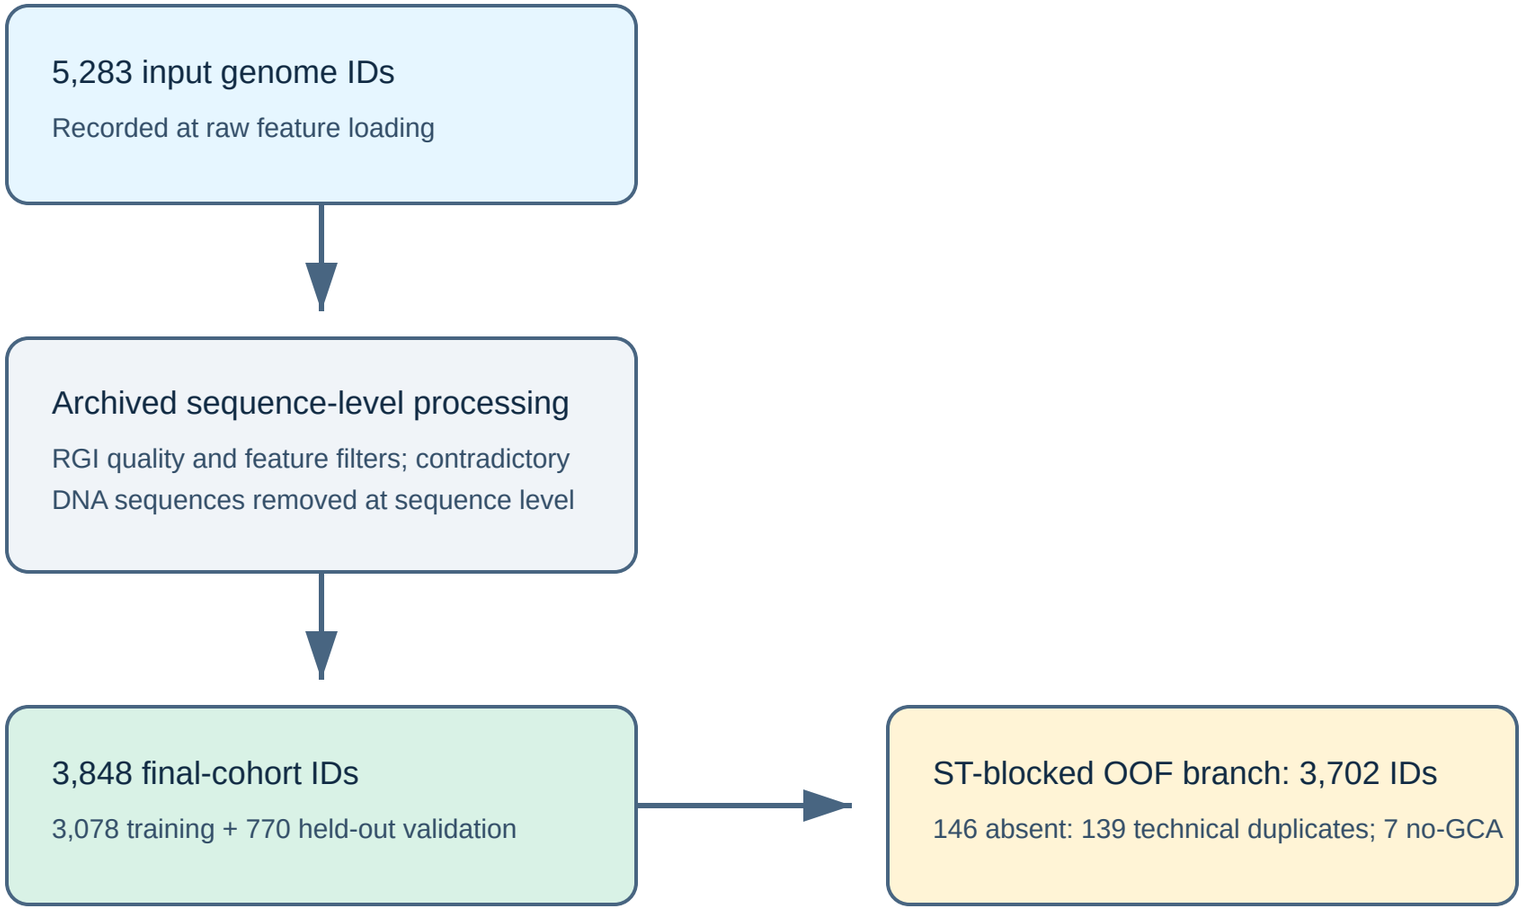
Recorded cohort flow and separate provenance reconciliation

Run-level counts are not an ID-level exclusion ledger.



The difference of 1,435 is not shown as a known exclusion stage: no ID-level initial/exclusion manifest was retained.

Separate Zenodo provenance panel

854 ledger records; not a filtering branch

354 exact GCA/GCF matches

200 exact RGI/EuSCAPE filename matches

130 stable EuSCAPE-code links

684/854 traceable representations

170 unresolved provenance

No cause of exclusion assigned

No assertion of membership in the 1,435 difference between aggregate run counts
